

# CLIENT INNOVATION NETWORK

## Training Menu

Members of our Client Innovation Network have access to these training sessions which can be tailored to suit your needs – virtual/hybrid/in-person (in London), shorter sessions or longer workshops. We'd be delighted to discuss your requirements with you. If you would like to sign up for any of these training sessions or to find out more, please [contact the Innovation team](#).

### Legal Process Design Workshop

As part of our Legal Process Design (LPD) programme, we work with our clients to streamline legal processes. The aim is to identify areas for improvement and clearly establish roles and responsibilities and different resources to be used at each stage. Through our LPD programme we can review a specific transaction, a transaction type we commonly carry out together, or aspects of your in-house legal operations. We will create a process map, hold a deep dive workshop and work with you afterwards to carry forward ideas generated. [Learn more here](#).

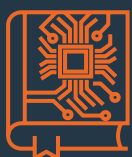

### Human-Centric Problem Solving

Legal teams are often asked to advise on problems facing the business. We consider the key methodologies which can be employed to help teams work smarter when approaching problem solving. We will cover problem solving and continuous improvement, Design Thinking and LPD at Slaughter and May from the view of the client or end user.

### Process Design: Train the Trainer

This session introduces the concept of LPD and how it links with Design Thinking. We explore our five-step LPD methodology to achieve the end goals; taking a deep dive into the Process Map which is one of the key outputs of the LPD methodology. We will then explore how to run an effective LPD workshop focusing on preparation, agenda, facilitation and challenges.

### Legal Tech Pilot Playbook

We will share our experience and advice on undertaking pilots of legal tech software within your organisation, and set out best practice guidance for trialling tech, centred around legal design principles. This session accompanies a suite of templates and materials we have developed for use during a legal tech pilot.

# SLAUGHTER AND MAY /

## Legal Project Management

Using legal project management methodologies, processes and tools can help increase visibility, provide certainty, and introduce efficiencies on your legal matters. In this workshop, we will discuss the everyday challenges you face in managing your legal matters and share practical solutions from a legal project management perspective. Drawing on our expertise, we will provide guidance on matter management best practices. We will explore with you how to incorporate quick wins in an in-house setting to help enhance how to plan ahead, manage internal resources, organise large volumes of materials and keep track of external costs as well as ensuring that know-how and learnings are captured for the benefit of others within your organisation.

## Utilising Data and Analytics

This session provides a “quick start” guide on how to leverage your data to achieve objective business benefits. It covers a checklist of the key considerations for a data project including governance, technology choices and data presentation. For those looking to optimise the impact of their data presentations, a more detailed exploration of data visualisation techniques is also available.

## Artificial Intelligence and the Legal Sector

This session aims to equip attendees with an easily digestible overview of the Artificial Intelligence space; depending on relevant training needs, this can be a high-level, general overview session, or a more specific session covering Machine Learning, Deep Learning, and/or Generative AI, and their applications in the legal sector. In either session, we can cover relevant principles, developments, market insight, our experiences, and/or an overview of relevant tools.

## Visual Design in Law

An overview of Legal Design principles, and how these can be applied to legal documents, with case studies from industry and insight into our visual design projects at Slaughter and May.

## Growth Mindset: Harnessing Potential

We will look at how mindset, and analysing your approach to work, can help foster an adaptable and resilient group, and build innovative, inclusive and dynamic working relationships. Participants will analyse their own approach to work, learn about listening to understand and consider the benefits of providing and receiving useful feedback.
